

EXTENDABLE GLASS-HOLDER FOR SEAT, PARTICULARLY FOR SEAT OF ECONOMY CLASS IN AN AIRCRAFT

ABSTRACT

The invention relates to an extendable glass-holder (3) for seat (1), particularly for seat (1) of economy class in an aircraft, said glass-holder (3) being housed within the seat armrest (2), and being extendable from the same, an extension mechanism (5) of the glass-holder (3) from the same armrest (2) being provided, said glass-holder (3) being comprised of a rigid arm (7), longitudinally movable with respect to the armrest (2), in such a way to be able to take a retracted position and an extracted use position, and of a movable arm, or finger (9), pivoted on said rigid arm (7), in such a way to take a closed position when said glass-holder (3) is in the retracted position within the armrest (2), and an open position, when said glass-holder (3) is in the extended position, said rigid (7) and movable (9) arms having, in the use configuration, a shape such to allow to support the glass.
